Key Features of Hanut "Airmax" Server Racks

Extra-Depth

Hanut server racks provide greater overall depth (900mm and 1000mm), which allows more space in front and rear for cable routing thus enhancing cable management inside the racks.

Because of their extra-depth the Hanut server racks are ready for even the deepest servers.

Front to back computer server grade ventilation

To dissipate heat, rack mount servers suck air from their front and exhaust hot air from their rear. Therefore front to back computer server grade ventilation is a must in all server racks.

Hanut 'Airmax' front and rear doors have 63% vent area for effective heat dissipation. Premium server racks like Compaq 9000 series universal racks, Acer Altos series racks, APC NetShelter enclosures, Dell PowerEdge series racks etc. all have this type of ventilation.

Ventilation from side panels as provided by some rack manufacturers in place of front to back ventilation is inadequate and unsuitable for rack mount servers. This type of ventilation is also not adaptable to multi-bay configuration where two or more server racks are coupled side by side.

Superior Cable management facilities

Hanut server racks are among the few server racks that have provision for 4 vertical cable channels for data and power cable routing.

Hanut server racks have welded rock solid construction and feel

The heavy-duty basic frame is made from 2mm MS steel and is MIG welded for rock solid strength and rigidity. Hanut 19" server racks are exceptionally strong and rigid.

Choose Hanut server racks for a saving of US\$250 or more / rack!!!

Lockable doors and side panels of Hanut server racks

Provide physical security and help prevent unauthorized access to critical IT equipment.

Hanut server racks ship fully assembled

No need to learn mechanical engineering and spending hours (Yek!) putting the server racks together.

Server Cabinet Accessories

Accessories supplement the server cabinet in enhancing the security, serviceability, manageability and reliability of mounted servers and other IT hardware.

In addition to all commonly required accessories like fixed shelf, power distribution unit etc., Hulasi offers many special accessories for server cabinets e.g. – anti-earthquake kit, KVM / console switch etc. to best meet its customers' requirements.

HMPL is committed to offering improved and/or new server cabinet accessories

▶ <u>Shelves</u> (Fixed, Sliding, Heavy Duty Fixed shelf, Utility Drawer, modem shelf, cable extension arm,...)	▶ <u>Power Distribution & Management</u> (Grounding kit, Horizontal PDU, Rack-mount UPS systems...)
